#### DETAILED ACTION

Applicant's amendment and arguments filed 1/4/2008 have been received and entered into the case. Claims 1 and 2 are pending. All arguments have been considered.

### Claim Rejections - 35 USC § 112

The previous 112 first and second paragraph rejections of record have been withdrawn due to applicants amendment filed 1/4/2008.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 2 recite the language "aromatics" and "required sizes" which are not defined nor made clear by the language. In addition, applying heat and cold air "in turn" and "turning" the epidermis is also unclear language.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maue (US 4762522).

Art Unit: 1651

Applicant claims a product by process comprising obtaining epidermis from a carcass of an animal (see claims 1 and 2).

Maue teaches the removal of skins/epidermis/hide from a carcass, soaking in a dichromate solution, i.e. pickling, which is known in the art to be performed in an acid, salt and water solution (col.1, lines 40-col.2 whole column, col. 7, lines 62-68), washing, drying, drum rotation (col.8-examples), exposing to ultraviolet light (col.11, lines 50-55), and oiling (col. 5, lines 1-30).

Maue does not teach cutting the epidermis of a fish, fowl or tortoise into required sizes, nor do they teach the specific temperatures and rpm.

However, at the time of the claimed invention, it would have been obvious to one of ordinary skill in the art to separate and obtain the epidermis from an animal, including fish, fowl, and tortoise given that the method of obtaining skin/hides is known in the art for animal such as chickens, cattle, and deer, i.e. tanning processes. Further, cutting into required sizes is arbitrary, thus one could easily optimize the size as needed, as well as the temperatures and rpm. Generally, differences in concentration or temperature will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such concentration or temperature is critical. "[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." In re Aller, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955) (Claimed process which was performed at a temperature between 40°C and 80°C and an acid concentration between 25% and 70% was held to be prima facie obvious over a reference process

Art Unit: 1651

which differed from the claims only in that the reference process was performed at a temperature of 100°C and an acid concentration of 10%.); see also Peterson, 315 F.3d at 1330, 65 USPQ2d at 1382 ("The normal desire of scientists or artisans to improve upon what is already generally known provides the motivation to determine where in a disclosed set of percentage ranges is the optimum combination of percentages."). See MPFP 2144 05

Moreover, at the time of the claimed invention, one of ordinary skill in the art would have been motivated to separate and obtain the epidermis from an animal, including fish, fowl, and tortoise with a reasonable expectation for successfully obtaining a bio-material because such a method is known in the art for obtaining skin/epidermis/hides from animals such as cattle, chickens, and deer, i.e. tanning processes. The patentability of a product does not depend on its method of production. If the claimed product is the same or obvious from a product in the prior art (i.e. the product disclosed in the cited reference), the claim is unpatentable even though the reference product was made by a different process. When the prior art discloses a product which reasonably appears to be identical with or slightly different than the claimed product-by-process, rejections under 35 U.S.C 102 and/or 35 U.S.C 103 are proper. (MPEP 2113).

#### Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP

Art Unit: 1651

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TIFFANY M. GOUGH whose telephone number is (571)272-0697. The examiner can normally be reached on M-F 8-5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jon Weber can be reached on 571-272-0925. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
